

Well Child Check-up Reminder

Benefits of Well-Child Exams

The health and well-being of your child is very important to us at Minneola Community clinic. Making sure your child receives regular check-ups can help prevent illnesses, identify health concerns early, monitor your child's development and ensure your child gets the right immunizations at the right time. Well-child check-ups also allow your child to establish care with their primary care provider (PCP) and allows their PCP to become familiar with their health needs and write referrals as necessary. In addition, these check-ups can be used for enrollment in daycare centers, Bright Beginnings, and schools.

Well-child exams are performed by your child's primary care provider, and will include physical exam, vision screening, oral health exam, and other developmental screenings based on age.

Recommended ages for Well child check-ups

- 3-5 days
- 2 weeks
- 2, 4, 6, 9, 12, 15, 18, 24 months
- 3-21 years
